SQL · Python · dbt · Snowflake · BigQuery | Tableau · Power BI | Experimentation & AI

WORK EXPERIENCE

Data Analyst | NYC Health + Hospitals, Woodhull Medical Center

Oct 2025 – Present | New York, NY

- Reduced recurring report preparation time by 75%, from 4 hours to 1 hour, by automating data pulls, dashboard refreshes, and Excel tracking workflows across Epic, Snowflake, and internal systems.
- Increased reporting accuracy from 88% to 94% by tracing anomalies to source tables and introducing validation checks before reports were distributed.
- Improved dashboard refresh time by 60% on datasets containing millions of records by tuning Snowflake SQL, simplifying joins, and removing unnecessary transformation steps.
- Delivered trend and variance analyses for 5+ leadership reviews per quarter across five service lines, helping directors identify performance gaps and prioritize follow-up actions.
- Built 20+ Tableau, Power BI, and Excel dashboards across three departments by translating stakeholder questions into KPI definitions, validation rules, and reporting specifications.
- Standardized reporting practices across three departments by documenting metric definitions, source systems, refresh schedules, calculation logic, and validation procedures.
- Supported Epic go-live readiness by testing reports, validating outputs, resolving workflow issues, and training approximately 50 clinical and administrative users, contributing to a 25% reduction in post-launch support requests.

Graduate Research Analyst | Northwestern Mutual Data Science Institute

Jul 2024 – May 2025 | Milwaukee, WI

- Developed an AI-based respiratory screening research prototype by building an end-to-end Python pipeline with librosa, pandas, and scikit-learn to transform cough, breathing, and voice recordings into 150 acoustic features.
- Evaluated the model using participant-grouped validation to prevent data leakage, achieving a 0.85 ROC-AUC and approximately 80% sensitivity for identifying likely respiratory cases.
- Extended the analysis across four public respiratory datasets containing 18,000+ recordings from 2,200+ participants, achieving a 0.93 F1-score for COPD classification.

PROJECTS

A/B Testing and Experimentation Framework | Python, SciPy, statsmodels

- Exposed how naive daily "peeking" drives experiment false positives to 24%, versus 1.2% under always-valid inference, by building a frequentist and Bayesian framework with mSPRT sequential testing, power analysis, and sample-ratio-mismatch gates.
- Verified statistical correctness through 38 automated tests, including planted novelty-effect and Simpson's-paradox cases the framework detects automatically.

E-Commerce Analytics Platform | dbt Core, Snowflake, GitHub Actions

- Transformed roughly 1.5M rows across nine sources into a decision-ready Kimball star schema by building 17 dbt models with SCD Type 2 snapshots and incremental data marts.
- Prevented broken production deployments by engineering a CI/CD workflow that builds and tests every pull request in an isolated, ephemeral Snowflake schema.

Analytics RAG Agent | Python, LangChain, Claude API, DuckDB

- Enabled trustworthy natural-language analytics, scoring 100% on the evaluation suite (routing 14/14, retrieval hit@4 8/8), by building an agent that routes between cited document retrieval and read-only text-to-SQL.
- Blocked unsafe and fabricated queries by enforcing table allowlists and statement validation outside the model, hardened by a 33-test suite covering routing, guardrails, and end-to-end behavior.

TECHNICAL SKILLS

Data & Programming: Advanced SQL, Python, R, Excel, ETL/ELT, data quality validation, dimensional modeling, Kimball star schemas

Analytics & BI: Tableau, Power BI (DAX, Power Query), KPI development, forecasting, statistical analysis, A/B testing and experimentation, dashboard design

Cloud, Platforms & Databases: Microsoft Azure, AWS, Snowflake, BigQuery, PostgreSQL, dbt Core, Git/GitHub, GitHub Actions (CI/CD), Jira

EDUCATION & CERTIFICATIONS

University of Wisconsin, Milwaukee (Chancellor's Graduate Student Award)

Bachelor of Dental Surgery (BDS) | Dr. NTR University of Health Sciences, India

- Google Advanced Data Analytics Certificate
- Best Poster Award, Northwestern Mutual Data Science Institute (2024)
